# SHOPEE REVIEWS ANALYSIS

Extracting Actionable Insights from  
Google Play Store Feedback

Created by Krisna Riyadi

# PROJECT DISCLAIMER

This is a personal project created solely for educational and portfolio purposes. The data used is a public dataset obtained from Kaggle (<https://www.kaggle.com/datasets/ahmadseloabadi/shoppe-app-reviews-from-google-play-store>) and reflects only a specific time period. This dashboard is not affiliated with, sponsored by, or representative of the internal data or official views of Shopee or any related companies.

# Importance of User Feedback

 **Vital for E-commerce.** In the highly competitive e-commerce landscape, the quality of user experience (UX) and customer support play a vital role in a platform's success.

 **Rich Data Source.** One of the most valuable sources of data for evaluating these two aspects is direct consumer feedback.

 **Play Store Reviews.** Ratings and comments recorded on the Play Store offer unfiltered insights directly from the app's user base.

# THE ANALYTICAL BOTTLENECK

## Manual Processing

Manually reading, processing, and analyzing thousands of raw comments is incredibly time-consuming and highly impractical for daily operations.

## Need for Agility

Product Managers and Customer Service teams are required to act quickly to identify the main causes of customer dissatisfaction during specific promotional periods.

## Bug Detection

Without automated tools, finding critical technical issues, crashes, or bugs introduced in the latest app update becomes a slow, reactive process.

# THE SOLUTION

## INTERACTIVE DASHBOARD DEVELOPMENT

In response to these challenges, this project was initiated to design and develop an Interactive Dashboard as a data-driven analytics solution. This system aims to automate the process of extracting insights from raw user review data into actionable information. Through this dashboard, shifts in customer sentiment trends can be clearly visualized, facilitating a more specific analysis of issues enabling internal teams to formulate improvements more quickly.

# TERACTIVE LOOKER STUDIO

## EPLORE THE DATA YOURSELF

This presentation summarizes key findings, but the true power lies in exploring the data interactively. You are highly encouraged to access the fully functional Looker Studio dashboard. By visiting the link, you can dynamically filter the data by year, app version, and specific categories to uncover deeper, customized insights tailored to specific business questions.

# REVIEW CLASSIFICATION: CATEGORY DEFINITIONS

## Shipping & Logistics

This category is specifically for reviews that focus on shipping services, couriers, or delivery times.

## App Performance

This category is for user complaints regarding bugs, errors, or technical issues with the application system.

## Promotions & Coupons

This category containing comments about events (such as 12.12), voucher availability, free shipping, and product prices.

## Payments

This category includes Shopee's financial features such as ShopeePay, SPayLater, transfers, and refunds.

## Customer Service / Seller Support

This category highlights user interactions with Shopee Customer Service (CS) or with stores/sellers within the app.

## General Praise

This category for reviews that offer praise without referring to specific features.

## General Complaints

This category for reviews from frustrated users who threaten to delete the app without specifying a particular issue.

## Others

This category highly specific niche issues or edge cases (e.g., account bans, UI color changes) that don't fit main groups.

# DATASET OVERVIEW

Datataset reveals a polarized user base. While over half of the reviews indicate a positive experience, the average score of 3.3 highlights significant friction points that require attention.

**50,611**

(Out of 5)

**52.9%**

Positive Sentiment

# TOP 3 COMPLAINT IN 2024

Analyzing the "Bad" sentiment segment (scores 1-3) for the year 2024 reveals that Shipping and Logistics overwhelmingly dominates user frustration, serving as the primary bottleneck for user satisfaction, followed by application stability.

# GLOBAL SCORE DISTRIBUTION

The "U-shaped" distribution highlights a strongly polarized user base. While the majority of users (43.9%) give a perfect 5-star rating, a massive 28.9% grant the lowest possible score (1-star), indicating severe breakdowns in experience, heavily tied to the previously identified logistics issues.
